

AMENDMENTS TO THE CLAIMS

The following is a complete listing of the claims indicating the current status of each claim and including amendments currently entered as highlighted.

1. (Currently Amended) An integrated storage device for storing a data package received wirelessly from a remote base station, comprising:
 - (a) a primary non-volatile storage medium which is ~~only accessible when said primary non-volatile storage medium is electrically connected~~ via a wired power link to an appliance power supply of an appliance;
 - (b) a secondary non-volatile storage device ~~which is permanently operationally connected to said primary non-volatile storage medium, said secondary non-volatile storage device being accessible in order to store the data package even when electrically disconnected from said power supply; and~~
 - (c) an antenna, configured to wirelessly receive from the remote base station:
 - (i) the data package wirelessly from the remote base station; and
 - (ii) electrical energy for powering said secondary non-volatile storage device for storing the data package; and
 - (d) a processor arrangement permanently operationally connected to said secondary non-volatile storage device and said primary non-volatile storage medium, said processor arrangement being configured for automatically copying the data package from said secondary non-volatile storage device to said primary non-volatile storage medium after said primary non-volatile storage medium is electrically connected to said appliance power supply.

2-4. (Canceled)

5. (Currently Amended) The device of claim [[4]], further comprising:

(e) a housing, wherein said secondary non-volatile storage device, said primary non-volatile storage medium and said processor arrangement are disposed in said housing.

6. (Original) The device of claim 1, wherein said primary non-volatile storage medium is configured to store at least one megabyte of data.

7-12. (Canceled)

13. (Currently Amended) A method for storing data in an integrated storage device, the storage device including a primary non-volatile storage medium, a secondary non-volatile storage device and an antenna, the method comprising the steps of:

- (a) wirelessly receiving an electrical energy via the antenna;
- (b) powering the secondary non-volatile storage device using said electrical energy;
- (c) wirelessly receiving a data package from a remote base station via the antenna;
- (d) storing said data package in the secondary non-volatile storage device when the secondary non-volatile storage device is powered only by said electrical energy;
- (e) electrically connecting the primary non-volatile storage medium to an appliance power supply of an appliance via a wired power link; and

- (f) after said step of electrically connecting, automatically copying said data
package from the secondary non-volatile storage device to the primary non-
volatile storage medium using electrical power of said appliance power
supply, wherein said step of copying is performed after said step of electrically
connecting.

14. (Canceled)

15. (Original) The method of claim 13, further comprising the step of:

- (g) reading a user identification from the secondary non-volatile storage device,
by said remote base station, said step of receiving said data package being
contingent on verification of said user identification by said remote base
station.

16. (Original) The method of claim 15, wherein said data package includes a
transaction log item.

17. (Currently Amended) The method of claim 13, further comprising the step of:

- (g) at least partially configuring at least one of the storage device and ~~an~~ said
appliance using said data package, when the storage device is electrically
connected to said appliance power supply.

18. (Original) The method of claim 17, further comprising the step of:

- (h) packaging the storage device, wherein said steps of receiving a data package
and storing said data package are performed after said step of packaging.

19. (Original) The method of claim 13, wherein said data package includes a configuration data set.

20. (Currently Amended) The method of claim 13, further comprising the step of:

(g) operationally connecting the storage device to said appliance, wherein said appliance is ~~which is selected from the group consisting of a camera, a cellular telephone, a personal processing system, wherein said step of copying is performed after said step of operationally connecting.~~

21. (New) The method of claim 13, further comprising the step of:

(g) operationally connecting the storage device to said appliance, wherein said appliance is a cellular telephone.

22. (New) The method of claim 13, further comprising the step of:

(g) operationally connecting the storage device to said appliance, wherein said appliance is a personal processing system.
